

Sealing Solution for Mono-Material Cup Lidding

Sealing Round Heater Hygienic

watttron
The benchmark of efficiency

Challenges

in mono-material processing

- Small sealing window of mono-materials
- Temperature variation of conventional sealing systems lead to start-up losses and limited quality
- Established In-Line-Quality control systems do not work properly with mono-material lids

Solution

- Pixel-wise heating for **unrivalled temperature accuracy**
- Very localized heat supply for **best energy efficiency** and **lowest material treatment**

Benefits

Mono-material sealing
with unrivalled
temperature precision

Easy to retrofit

Saves up to 50% energy

Ready for In-Line-Quality
Control
